

Business Cards - Luxury Spot

File Requirements

- Files are supplied as Print Ready PDF
- PDF with crop marks no registration marks and color bars.
- All files to be CMYK, not RGB
- All fonts are embedded or converted to curves or outlines.
- Embed all images and elements
- Files to be 100% scale unless otherwise specified
- If bleed is required, please include 3mm bleed on all edges.

We recommend that all text and images are kept within the "safe zone" of the page, as during the trimming process variations of up to 2mm can occur.

To do this, keep all text/ images at least 5mm away from the finished size.

Guide to submit files for SPOT UV printing

When you send us an order for spot UV cards, please remember that you must send 4 files:

side_1

side_1_spot_UV

side_2

side_2_spot_UV

Side_1 and side_2 are your design files, while side_1_spot_UV and side_2_spot_UV are black and white files where black indicates where you want the spot uv to be applied (the glossy spots).

Resolution

Please ensure all graphics and images are in their final size (100%) and correct resolution is at least 300dpi.

Pantone Colours

If required Pantone colours must be supplied from the PANTONE+ Solid Coated library

Sending Us Your Files

Over 10MB files send via secure file transfer service or share with Google Drive at info@dpsdesign.com.au
